

SSBF Bi-Folding Gate

Complete security solutions, from consultation to installation

The SSBF Bi-Folding Trackless Gates are the ideal solution where speed of opening and closing is essential, typically at more than twice the speed of a traditional sliding or hinged gate of the same size ensuring a fast throughput of traffic whilst maintaining site security or where space is at a premium.

Capable of spanning clear openings up to 8 metres at heights up to 3 metres. The gate supports and frame are manufactured from rectangular hollow section steel and with bar or mesh infill options. Coupled to a high quality 100% Duty Rated Motor & Gearbox, the reliability of the gate is assured in all weather conditions.

For Pedestrian and Vehicle safety and in order to comply with British Standards BS EN12453:2001 for Industrial Garage Doors and Gates all Security Solutions hinged gates are offered alongside Safety Loop and Photocell Systems.

Security Solutions offers a complete turnkey solution from design to handover along with a comprehensive after sales support to meet your immediate and long term needs.

Our Service - A Complete Solution

Security Solutions manufacture, install and maintain perimeter security equipment. With many years experience in the industry we offer a complete range of services including Design, Installation, Maintenance and Service of new and existing equipment.

We provide a range of high quality, cost effective physical access security solutions that meet or exceed the requirements of today's security conscious company.

Whether it be controlled entrance & exit to your site, control of your car parking, additional access points in your perimeter fencing or high security protection of your sensitive areas or products; Security Solutions has the answer to your problem.

We pride ourselves not only on the quality of our workmanship but also on the advice that can be provided from our experienced staff. If you are considering enhancing your current security we would be delighted to provide you with a no obligation site survey and quotation.

If you require more information or a representative to contact you, please call us directly on + 44 (0)845 604 8144
