

StadiaPod Turnstile

Complete solution **Total control**

Complete security solutions, from consultation to installation

West Ham United, Olympic Park

Fleetwood Town

Burnley

Security Solutions manufactures a range of robust StadiaPods for both internal and external locations in full height or half height configurations. Through our knowledge and expertise we can provide a consultation service working with architects, consultants and clients on Stadia project

The StadiaPod can be designed and manufactured to fit seamlessly into your existing stadium structure meeting all your security and pedestrian control requirements and can be installed as a stand alone unit or part of a fully integrated system.

Available in Galvanised or Polyester Powder Coated Mild Steel or Stainless Steel grade 304/316 these units utilise leading edge technology to meet the needs and demands of today's stadium environment.

Description

90 Degree Rotor Full Height Bi-Directional Turnstile. Fully welded steel construction, surfaces subject to personnel passage are smooth and rounded to prevent injury.

Counters

All Turnstiles have a 6 Digit Non-Resettable Counter to count 'Entry' only.

Remote Count

Our new turnstile printed circuit board the W9LKE, designed specifically with Stadia projects in mind has volt free input signals for operation, input signals for fire alarm interfaces and volt free outputs for external counting systems.

All turnstiles have operator pay screens, foot pedal control, non-resettable counter and can be upgraded with a Stadia count or ticketing access control system if required at a later date.

The main features of the StadiaPods are the ease of use, rugged and reliable, bi-directional functionality as standard, all components are designed to withstand the harshest of environments and flexibility in design with a range of options on the aesthetic finish providing a high degree of operational site security along with a safe environment for the operator
